GFC FINISHING SYSTEM SERVICES

- I. Support Programs & Training
- II. Preventive Maintenance Programs
- III. Burner/Gas Train Inspections
- IV. Warranty Programs

General Fabrications Corporation offers a variety of training and maintenance programs to assist in keeping your finishing system operating like new. Timely decisions and basic maintenance tasks can extend the life of your finishing equipment alleviating costly downtime.

General Fabrications mechanical and electrical field technicians are fully trained and experienced on the operating procedures on all equipment integrated within a GFC Finishing System.

Whether it is a required spare part, an on-site visit or just troubleshooting over the telephone, General Fabrications will assist you in keeping your finishing equipment operating.

General Fabrications offers three levels of repair/maintenance services.

- Repair service for immediate/urgent repairs due to breakdown.
- Weekly repair maintenance and maintenance services.
- Semi-annual and/or annual maintenance and preventive checks on all equipment, including all gas fired burners, gas trains and controls.

Serving the Finishing Industry,
nationally and internationally
for over 25 years!

GFC SUPPORT PROGRAMS & TRAINING:

- System Start-Up Procedures
- System Equipment Training
- System Support Programs

System Start-Up/Shut-Down Procedure:

During initial system installation, GFC trains your appointed personnel on the system start-up/shut-down procedures. Throughout the years, many changes occur within a company; new personnel, additional equipment, etc. GFC offers a system start-up/shut-down procedure program to train new employees or retrain existing employees on the proper system start-up/shut-down sequence.

System Support Programs:

A GFC system support technician is available to answer technical questions regarding the operation of GFC Finishing Systems. GFC is always available for their customers whether it's spare parts, troubleshooting techniques or service calls*.

GFC highly recommends purchasing essential spare parts with the installation of a finishing system. With many different components involved within a system, our spare parts program will identify critical spare parts that can ensure less costly downtime due to an emergency breakdown.

*Same day service is available, pending on location.

System Equipment Training:

With expansive knowledge of all facets of a finishing system, GFC offers mechanical and electrical system equipment training.

A GFC mechanical or electrical technician will train your appointed personnel on the design specifications on individual system components throughout the finishing system.

GFC MAINTENANCE PROGRAMS:

- Preventive Maintenance Schedules
- On-Site Training Courses

System Preventive Maintenance:

Performing preventive maintenance on your GFC Finishing System and components can assure your finishing system will operate like new throughout the years. GFC highly recommends creating an in-depth in house preventive maintenance program for your maintenance department.

GFC's preventive maintenance services can train your appointed personnel on daily, monthly and yearly preventive maintenance measures to keep your finishing system operating like new.

GFC offers complete on-site training courses tailored specifically for your GFC Finishing System. GFC will train your plant maintenance engineer on developing an in-house preventive maintenance schedule.

Benefits:

- Personal troubleshooting knowledge on system and system components.
- Identify potential problems before they occur.
- Planning and budgeting for system parts and service.
- Reduce costly downtime.
- Documentation of your facility's maintenance schedules.
- Longevity of your finishing system.

GFC BURNER/GAS TRAIN INSPECTION:

General Fabrications Corporation offers different levels of service for your GFC gas-fired equipment. GFC offers semi-annual and annual Burner/Gas Train Inspections. With first hand knowledge of your finishing system, Burner/Gas Train Inspections are performed by GFC Technicians.

GFC Technicians review the current status and operating parameters of your current gas-fired burners. All safeties are checked and adjustments are made if required. All start-up and shut-down procedures are reviewed to ensure all equipment is operating under original design conditions and that your burners are operating at their peak efficiency.

Service calls can generally be completed in a full working day, unless multiple systems are to be serviced.

All services performed by GFC Technicians shall be followed up by a complete service report summarizing the work performed for each piece of equipment, problems found, status of each and a summary of all corrections made.

A formal Inspection Completion Form shall be provided for your records and also serve as proof that this required annual inspection has been completed.

To ensure your gas-fired burners are operating at their peak efficiency, call GFC today and schedule a Burner/Gas Train Service.

Most of GFC's customer base have schedules set on an annual basis. This alleviates missed scheduling of a service or if personnel turnover, then the service is taken care for already by GFC.

Call GFC today and schedule this required service.

GFC WARRANTY PROGRAMS:

“A company’s warranty policy is an accepted measure of its confidence in its products.”

Standard One (1) Year Warranty:

In addition to the standard one (1) year warranty on parts against defect and operation, GFC offers two (2) year extended warranties. These warranties are valid as long as proper maintenance has been performed and equipment operates under original design conditions.

Ten (10) Year Warranty:

All Spray washer tanks and washer upper housings, heated and unheated, regardless of material used, supplied by GFC which under normal use and operation conditions in the plant of the original purchaser, prove to be defective within ten years from date of shipment, will be repaired and/or replaced by GFC, without charge to the purchaser.
